INTRODUCTION

This document compiles the Terms of Reference (ToR) for the various units within the Environmental Research and Radiation Safety (ERRS) Department of the Environmental Protection Agency (EPA) of Liberia. The department is headed by a Director, with each unit led by an Assistant Director. This compilation aims to provide a clear overview of the responsibilities, duties, and qualifications for key personnel across the Chemical Management Unit, Environmental Monitoring and Research Unit, Radiation Safety Unit, and Waste and Remediation Unit.

DEPARTMENTAL VISION, MISSION, AND CORE VALUES

VISION

To be a leading force in environmental protection and radiation safety, fostering a healthy and sustainable Liberia through scientific excellence, regulatory compliance, and community engagement.

MISSION

To safeguard public health and the environment by conducting rigorous research, monitoring environmental parameters, ensuring safe chemical and radiation management, and promoting sustainable waste and remediation practices.

CORE VALUES

- **Integrity:** Upholding the highest ethical standards in all our operations and interactions.
- **Excellence:** Striving for scientific rigor, accuracy, and continuous improvement in all our endeavors.
- **Collaboration:** Fostering strong partnerships within the department, across government agencies, and with national and international stakeholders.
- **Accountability:** Taking responsibility for our actions and their impact on the environment and public well-being.
- **Innovation:** Embracing new technologies and approaches to address complex environmental challenges.

INTER-UNIT COLLABORATION AND CROSS-FUNCTIONAL RESPONSIBILITIES

The effectiveness of the Environmental Research and Radiation Safety Department relies heavily on seamless collaboration and integrated efforts across its specialized units. While each unit has distinct responsibilities, many environmental challenges require a multi-disciplinary approach. The following outlines key areas and mechanisms for inter-unit collaboration:

- **Joint Research Initiatives:** Units will collaborate on research projects that span multiple environmental domains, such as the impact of chemical waste on water quality, or the

remediation of sites contaminated with both chemical and radioactive materials. This includes shared methodologies, data collection, and analysis.

- **Information and Data Sharing:** Regular exchange of data, reports, and findings between units is crucial. This ensures a holistic understanding of environmental conditions and facilitates comprehensive risk assessments. A centralized data management system will be utilized to promote accessibility and consistency.
- **Emergency Response Coordination:** In the event of environmental emergencies (e.g., chemical spills, radiation incidents, hazardous waste leaks), units will coordinate their response efforts, leveraging specialized expertise from each area to ensure a rapid, effective, and safe resolution.
- **Policy and Standard Development:** Collaboration is essential in developing integrated environmental policies, regulations, and standards that address cross-cutting issues. This ensures that guidelines for one area (e.g., chemical management) consider implications for others (e.g., waste remediation or environmental monitoring).
- **Training and Capacity Building:** Units will share knowledge and provide cross-training opportunities to enhance the overall technical capacity of the department. This includes joint workshops, seminars, and sharing of best practices in areas like laboratory analysis, field sampling, and regulatory enforcement.
- **Joint Environmental Monitoring and Audits:** Where applicable, units will conduct joint monitoring and audits of facilities or sites that involve multiple environmental aspects (e.g., industrial facilities handling chemicals and generating waste, or medical facilities using radiation and managing biomedical waste). This ensures comprehensive compliance checks and efficient resource utilization.
- **Public Awareness and Outreach:** Collaborative efforts will be undertaken to educate the public and stakeholders on integrated environmental issues, promoting awareness of risks and sustainable practices across all areas of the department's mandate in collaboration with Inter-Sectorial and Coordination Department.

Through these collaborative mechanisms, the Environmental Research and Radiation Safety Department aims to achieve a synergistic approach to environmental protection, ensuring that its efforts are comprehensive, efficient, and maximally impactful.

TERMS OF REFERENCE OF ERRS STAFF

DIRECTOR, ENVIRONMENTAL RESEARCH AND RADIATION SAFETY DEPARTMENT

- **Reports to:** Executive Director, Environmental Protection Agency, Liberia
- **Responsibilities and Duties:**
  - Supervise the activities of all units in the department.
  - Represent the department at the senior management team meetings.
  - Serves as the principal scientist at the EPA.
  - Represent the department at local and international stakeholder meetings.
  - Approves all environmental laboratory analysis results.
  - Approves all waste remediation plans.

- Review all licenses before submission for executive approval.

- **Minimum Qualifications:** Research Master's degree (MRes or MPhil) in Environmental Science, Chemistry, Chemical Engineering, Environmental Engineering or a related field with at least 10 years of progressive experience in chemical or environmental management.

CHEMICAL MANAGEMENT UNIT (CMU)

The Chemical Management Unit (CMU) is responsible for monitoring the proper handling, storage, use, and disposal of chemicals throughout Liberia. It serves a crucial role in reducing chemical pollution and ensuring that chemical procedures comply with national and international safety requirements. The section oversees the national chemical inventory, gives licenses for chemical importation and disposal, and monitors wastewater discharge. CMU also organizes training programs on chemical safety, conducts monitorings of chemical storage facilities, and supports emergency response for chemical accidents. Its purpose is to mitigate chemical-related environmental and health concerns by effective regulation, monitoring, and stakeholder involvement.

ASSISTANT DIRECTOR, CHEMICAL MANAGEMENT UNIT

- **Reports to:** Director, Environmental Research and Radiation Safety Department
- **Responsibilities and Duties:**
  - Inventory management of chemicals (procurement, tracking, and disposal).
  - Collaborate with stakeholders on chemical safety issues.
  - Develop and implement a chemical safety policy.
  - Monitoring of chemical storage facilities and laboratories.
  - Conduct Research on chemical safety and pollution prevention.
  - Develop a training program for chemical safety.
  - Developing emergency response plans for chemical spills or accidents.
  - Training staff and others on chemical safety and handling procedures.
  - Implement national and international chemical safety standards.
  - Coordinating hazardous waste disposal in an environmentally sound manner.
  - Conducting chemical risk assessments and audits.
  - Prepare a draft of all chemical disposal certificates.
  - Prepare and draft effluent discharge Licenses, chemical importation and registration licenses, chemical disposal certificates.
  - Prepare a draft of all laboratory accreditation licenses.
- **Minimum Qualifications:** Master's degree in Environmental Science, Chemistry, Chemical Engineering, or a related field with at least 5 years of progressive experience in chemical or environmental management.

INDUSTRIAL REMEDIATION SUPERVISOR

- **Reports to:** Assistant Director, CMU
- **Responsibilities and Duties:**
  - Recommend emergency response measures to chemical incidents and industrial pollution.
  - Assist in ordering and receiving office supplies and management.
  - Field supervisor for chemical escorts.
  - Access sites for contamination and testing if required.
  - Advise the Agency on the clean-up of contaminated sites.
  - Label, categorize, and store files according to office standards and classification.
- **Minimum Qualifications:** Master's degree in Environmental Engineering, Environmental Science, or a related field with at least 3 years of experience in industrial remediation or pollution control.

INDUSTRIAL SAFETY ANALYST

- **Reports to:** Industrial Remediation Supervisor
- **Responsibilities and Duties:**
  - Conduct regular safety monitorings and risk assessments in industrial facilities.
  - Develop, implement, and monitor safety policies, procedures, and programs.
  - Ensure compliance with relevant safety legislation and regulations.
  - Investigate accidents and incidents to identify causes and recommend preventive measures.
  - Provide training and awareness programs for employees on industrial safety protocols.
  - Maintain safety records, prepare reports, and submit them to management.
  - Liaise with regulatory bodies and support audits and monitorings.
  - Recommend and supervise the installation of safety equipment (e.g., fire extinguishers, warning signs, emergency exits).
  - Monitor the use of personal protective equipment (PPE) and ensure adequate supply.
  - Promote continuous improvement of the safety management system (SMS).
  - Participate in risk management planning and emergency preparedness drills.
- **Minimum Qualifications:**
  - Bachelor's degree in environmental science, Industrial Engineering, or a related field.
  - A postgraduate certificate or diploma in industrial safety or occupational health is an added advantage.
- **Experience:**
  - Minimum of 2 years of relevant experience in an industrial or manufacturing environment.

- **Knowledge and Skills:**
  - Familiarity with industrial machinery and hazards.
  - Good report-writing and communication skills.
  - Proficient in MS Office and safety management software.
  - Strong interpersonal and training abilities.

INDUSTRIAL REMEDIATION ANALYST

- **Reports to:** Industrial Remediation Supervisor
- **Responsibilities and Duties:**
  - Conduct environmental assessments of polluted industrial sites.
  - Collect and analyze soil, water, and air samples to determine contamination levels.
  - Identify sources and types of pollutants affecting sites.
  - Design site-specific remediation strategies, including physical, chemical, and biological treatments.
  - Monitor progress and effectiveness of remediation efforts.
  - Ensure industrial remediation efforts meet national and international environmental standards.
  - Maintain records of all remediation activities, environmental tests, and follow-up evaluations.
- **Minimum Qualifications:**
  - Bachelor's degree in environmental science, Environmental Engineering, Industrial Chemistry, Geology, or related field.
- **Experience:**
  - Minimum of 2 years of relevant work experience in environmental remediation, industrial pollution management, or related fields.
- **Technical Skills:**
  - Knowledge of environmental regulations and remediation standards.
  - Ability to use environmental monitoring and assessment tools.
  - Strong reporting and project management skills.
  - Strong communication and coordination skills.
  - Ability to work in field and challenging environments.
  - Certification in hazardous waste handling, environmental audit, or remediation (preferred).

CHEMICAL REMEDIATION SUPERVISOR

- **Reports to:** Assistant Director, CMU
- **Responsibilities and Duties:**
  - Conduct routine monitorings and audits to identify potential risks.

- Investigate incidents involving chemical exposure or spills.
- Monitor and evaluate chemical usage trends and recommend safer alternatives.
- Supervises the conduct of effluent quarterly monitoring.
- Update pollutant registry.
- Prepare and draft effluent discharge Licenses, chemical importation and registration licenses, chemical disposal certificates, etc.
- Review Environmental Reports and make inputs during weekly ESIA Internal Review sittings.
- Create and maintain the central Chemical Management Unit Database of all chemicals and uphold up-to-date licenses and permits related to chemical handling.
- Maintain the Pollution Registry Database.
- Prepare quarterly and annual reports for the Chemical Management Unit and other units at the ERRS.
- Prepare PowerPoint presentations for the entire ERRS Department.
- Perform any other task that may be assigned by the Director and Assistant Directors of the ERRS.

- **Minimum Qualifications:** Master's degree in Environmental Science, Chemistry, or a related field with at least 3 years of experience in chemical remediation or environmental monitoring.

CHEMICAL SAFETY ANALYST

- **Reports to:** Chemical Remediation Supervisor
- **Duties and Responsibilities:**
  - Conduct risk assessments for chemical handling, storage, and disposal.
  - Ensure proper labeling, storage, and inventory of hazardous materials.
  - Monitor compliance with relevant chemical safety regulations.
  - Train staff on chemical safety, PPE use, and emergency response procedures.
  - Coordinate chemical spill response and manage hazardous waste disposal.
  - Carry out periodic audits and monitorings of laboratories, storerooms, and facilities.
  - Keep up to date with changes in chemical safety legislation and best practices.
  - Participate in incident investigations and recommend corrective actions.
- **Minimum Qualifications and Requirements:**
  - Bachelor's degree in chemistry, Environmental Science, Occupational Health and Safety, Chemical Engineering, or related field.
  - Master's degree or professional certification in Chemical Safety or Industrial Hygiene is an advantage.
- **Experience:**
  - Minimum of 2 years of relevant experience in chemical safety, occupational health, or environmental compliance.

- Proven knowledge of chemical risk assessment, hazardous material handling, and regulatory frameworks.

- **Skills:**
  - Strong understanding of MSDS/SDS, hazard communication, and chemical classification systems (GHS).
  - Proficiency in Microsoft Office and chemical inventory management tools.
  - Good communication and training delivery skills.
  - Ability to analyze data and generate safety reports.
  - Strong organizational and problem-solving abilities.

CHEMICAL HANDLERS

- **Reports to:** Chemical Remediation Supervisor
- **Responsibilities and Duties:**
  - Receive and monitor chemical shipments for proper labeling, packaging, and documentation.
  - Safely transport chemicals to designated storage areas or laboratories.
  - Ensure proper storage of chemicals based on compatibility and safety requirements (e.g., flammables, acids, bases, oxidizers).
  - Accurately label and re-label containers as needed in accordance with GHS (Globally Harmonized System) standards.
  - Monitor stock levels and notify supervisor when chemicals need replenishment.
  - Maintain inventory records and update chemical safety data sheets (SDS) logbooks.
  - Use appropriate PPE (Personal Protective Equipment) when handling hazardous substances.
  - Report spills, leaks, and unsafe conditions immediately to the Chemical Safety Officer.
  - Assist with the proper segregation, collection, and disposal of hazardous waste.
  - Participate in regular chemical safety training and drills.
  - Maintain cleanliness and order in chemical storage areas and workspaces.
  - Support emergency response actions in case of chemical incidents.
- **Minimum Qualifications:** Bachelor's degree in natural sciences, agriculture, forestry, or engineering. Prior experience in handling chemicals or in a warehouse setting is preferred.
- **Skills:**
  - Knowledge of chemical safety procedures and regulations.
  - Ability to read and interpret labels and Safety Data Sheets (SDS).
  - Skill in handling chemicals safely and using appropriate equipment.
  - Physical fitness to lift and carry chemical containers.
  - Strong attention to detail and commitment to safety practices.
  - Basic computer literacy for inventory logging and documentation.

- Ability to work independently and as part of a team.

POLLUTION REGISTRY TECHNICIAN

- **Reports to:** Chemical Remediation Supervisor
- **Responsibilities and Duties:**
  - Collect, label, and prepare biological, chemical, or environmental samples for analysis.
  - Ensure accurate documentation and handling of all specimens.
  - Conduct routine calibration and maintenance of equipment to ensure accuracy.
  - Record test results accurately and timely in laboratory logs or databases.
  - Ensure the pollution registry database is secure, backed up, and functioning efficiently.
  - Work with other units within the ERRS, (air quality, water quality, waste management, etc.) to integrate pollution data.
- **Minimum Qualifications:** Bachelor's degree in Environmental Science, Data Management, or a related field with at least 2 years of experience in data collection and management.

ENVIRONMENTAL MONITORING AND RESEARCH UNIT (EMR)

The Environmental Monitoring and Research Unit (EMR) is a specialist division responsible for conducting systematic environmental monitoring and applied research across Liberia's land and aquatic ecosystems. It generates credible, science-based data to drive national policy, environmental impact assessments, and regulatory enforcement. The unit operates across important environmental media—air, water, soil, radiation, and noise—providing insights that enable compliance with national and international environmental standards. Its fundamental objective is to ensure quick, accurate, and actionable environmental intelligence through empirical research, quality-assured laboratory testing, and field monitoring.

ASSISTANT DIRECTOR- ENVIRONMENTAL MONITORING AND RESEARCH

- **Report Line:** Director, Department of Environmental Research and Radiation Safety
- **Key Responsibilities:**
  - Oversee environmental sampling, data collection, and analysis.
  - Develop reports and publications on environmental findings.
  - Collaborate with external researchers and partners.
  - Ensure quality control and validation of environmental data.
  - Conduct investigations of environmental incidents and emergencies.
  - Conduct field research on emerging environmental issues.
  - Conduct environmental monitoring to validate non-compliance documents.
  - Prepare draft environmental standards and regulations.
- **Minimum Qualification:** Master's degree in Environmental science/management, Environmental Engineering, Natural Resource Management, Environmental Chemistry,

Analytical Chemistry or a closely related field. At least 5 years of progressive professional experience in environmental monitoring, research, regulatory compliance, or environmental policy implementation.

ENVIRONMENTAL MONITORING SUPERVISOR

- **Reporting Line:** Reports to the Assistant Director, EMR Unit.
- **Key Responsibilities:**
  - Support field monitoring operations across air, water, and soil matrices.
  - Analyze monitoring data and provide preliminary reports for review.
  - Assist in the development of monitoring plans and protocols.
  - Support coordination of monitoring teams and field logistics.
  - Collaborate with lab staff for timely sample analysis.
- **Minimum Qualification:** Master's degree in Environmental Science, Environmental Management, or related field. Minimum 3 years of field experience in environmental data collection or analysis.

ENVIRONMENTAL MONITORING ANALYST

- **Reporting Line:** Environmental Monitoring Supervisor
- **Key Responsibilities:**
  - Conduct regular field sampling of air, water, and soil.
  - Ensure adherence to EPA protocols during sample collection.
  - Prepare and submit field data sheets and chain-of-custody records.
  - Operate field monitoring instruments and conduct routine calibrations.
  - Report observed environmental violations or anomalies to supervisors.
- **Minimum Qualification:** Bachelor's degree in Environmental Science, Chemistry, or Natural Resource Management. At least 2 years of field experience preferred.

OCCUPATION AND HEALTH SAFETY TECHNICIAN

- **Reports to:** Environmental Monitoring Supervisor
- **Responsibilities and Duties:**
  - Inspect workplaces to identify hazards and ensure safety compliance.
  - Conduct hazard assessments and maintain safety records.
  - Assist in accident investigations and prepare reports.
  - Support safety training and awareness programs.
  - Maintain emergency response plans and safety equipment.
- **Minimum Qualification:** Bachelor's in Occupational Health & Safety, Environmental Health, or related field.

Experience: 2 years in workplace safety or compliance monitoring. National Examination Board in Occupational Safety and Health (NEBOSH), Institution of Occupational Safety and Health (IOSH), or equivalent safety training is an added advantage

ENVIRONMENTAL MONITORING TECHNICIAN

- **Reports to:** Environmental Monitoring Supervisor
- **Responsibilities and Duties:**
  - Collect air, water, soil, and noise samples for analysis.
  - Operate and maintain environmental monitoring equipment.
  - Record, analyze, and report environmental data.
  - Assist in identifying pollution sources and compliance issues.
  - Support field surveys, inspections, and environmental impact assessments.
  - Follow safety procedures and regulatory guidelines during monitoring activities.

- **Minimum Qualification:** Bachelor's in Environmental Science, Environmental Management, Chemistry, Biology, or related field.

  Experience: 2 years in environmental monitoring or laboratory/field work. Skills: Sampling techniques, equipment handling, data recording, and basic environmental regulations knowledge. Training in environmental monitoring, GIS, or laboratory analysis is an added advantage

INSTRUMENTATION LABORATORY SUPERVISOR

- **Reporting Line:** Reports to the Assistant Director, EMR Unit.
- **Key Responsibilities:**
  - Manage operations of the instrumentation laboratory.
  - Oversee use and maintenance of analytical instruments (e.g., GC, AAS, UV-VIS).
  - Ensure all equipment is calibrated and functioning optimally.
  - Train technicians in the operation of instrumentation.
  - Troubleshoot analytical errors and ensure quality control compliance.
- **Minimum Qualification:** Master's degree in Chemistry, Instrumentation, or Applied Environmental Sciences. Minimum 3 years of experience in instrument-based lab management.

INSTRUMENTATION LABORATORY ANALYST

- **Reporting Line:** Reports to the Instrumentation Laboratory Supervisor
- **Key Responsibilities:**
  - • Operate and maintain lab instruments used for sample analysis.
  - • Prepare samples according to method-specific protocols.

- Perform instrument calibration and daily QC checks.
- Record and compile analytical results for review.
- Maintain cleanliness and organization of laboratory workspace.

- **Minimum Qualification:** Bachelor's degree in Laboratory Technology, Chemistry, or Instrumentation. 2 years of instrumentation laboratory experience preferred.

MARINE AND WATER QUALITY LAB SUPERVISOR

- **Reporting Line:** Assistant Director, EMR Unit
- **Key Responsibilities:**
  - Oversee testing and analysis of marine and freshwater samples.
  - Ensure laboratory compliance with EPA, ISO, and QA/QC standards.
  - Supervise lab technicians and assign daily tasks.
  - Approve and validate water quality data and reports.
  - Manage calibration, maintenance, and inventory of water testing instruments.
- **Minimum Qualification:** Master's degree in Environmental Chemistry, Marine Science, or Laboratory Technology. Minimum 3 years of lab management experience.

MARINE AND WATER QUALITY LABORATORY ANALYST

- **Reporting Line:** Marine and Water Quality Lab Supervisor
- **Key Responsibilities:**
  - Conduct testing of water and sediment samples following SOPs.
  - Maintain detailed lab records and enter data into databases.
  - Calibrate and maintain analytical instruments.
  - Support preparation of lab reports and QA documentation.
  - Adhere to all safety and contamination prevention procedures.
- **Minimum Qualification:** Bachelor's degree in Laboratory Technology, Chemistry, or Environmental Science. 2 years of laboratory experience required.

LABORATORY QUALITY CONTROL AND ASSURANCE SUPERVISOR

- **Reporting Line:** Reports to the Assistant Director, EMR Unit.
- **Key Responsibilities:**
  - Develop and implement lab QA/QC protocols.
  - Conduct periodic quality audits and internal checks.
  - Validate laboratory test results before submission.
  - Train lab staff on quality standards and compliance.
  - Ensure documentation of calibration, traceability, and reproducibility.

- **Minimum Qualification:** Master's in Environmental Chemistry, Laboratory Science, or Quality Management. At least 3 years of experience in QA/QC in a laboratory setting.

LABORATORY DATA ANALYST

- **Reports to:** Laboratory Quality Control Assurance Supervisor
- **Responsibilities and Duties:**
  - Ensure accurate data entry of laboratory test results into Laboratory Information Management Systems (LIMS) or designated databases.
  - Maintain and update laboratory records and databases regularly.
  - Review and validate data for completeness, accuracy, and consistency before reporting.
  - Generate regular and ad hoc laboratory reports for internal and external stakeholders.
  - Monitor laboratory data trends to support quality assurance and control efforts.
  - Collaborate with laboratory personnel to resolve data discrepancies or issues.
  - Ensure data confidentiality and integrity in line with institutional and regulatory policies.
  - Support external audits and data reviews by preparing and presenting required data.
  - Provide training and support to laboratory staff on data handling procedures and tools.
  - Participate in the development and updating of data collection tools and SOPs.
- **Required Competencies:**
  - Proficiency in Microsoft Excel, Access, and statistical/data analysis software.
  - Familiarity with Laboratory Information Management Systems (LIMS) is an advantage.
  - Strong analytical and organizational skills.
  - Attention to detail and high level of accuracy.
  - Ability to work independently and in a team.
  - Good written and verbal communication skills.
- **Minimum Qualifications:**
  - A bachelor's degree in laboratory science, Information Management, Public Health, Statistics, or a related field.
- **Experience:**
  - At least 2 years of experience in laboratory data management or health data systems.
  - Prior work experience in a laboratory or health facility setting is preferred.

RADIATION SAFETY UNIT

The Radiation Safety Unit (RSU) is responsible for regulating and coordinating all operations connected to the possession, use, transit, import, export, and disposal of radiation sources in Liberia. The unit assures national compliance with radiation safety standards, monitors

radiation risks in medical and industrial facilities, and maintains Liberia's radiation safety databases (RASIMS and RAIS). The RSU plays a critical role in preserving public health and the environment by enforcing safety standards, performing monitorings, and leading emergency response for radioactive accidents.

ASSISTANT DIRECTOR – RADIATION SAFETY UNIT

- **Report to:** Director, Environmental Research and Radiation Safety Department
- **Key Responsibilities:**
  - Lead the implementation of national strategies and programs for radiation safety in line with international standards.
  - Coordinate the activities of the Radiation Safety Unit, including industrial and medical practices.
  - Ensure compliance with national radiation protection regulations and IAEA standards.
  - Supervise and support all subordinate staff under the Radiation Safety Unit.
  - Provide technical advice to the Director and senior management on radiation protection issues.
  - Represent the Unit at national and international meetings related to radiation safety.
  - Oversee the preparation and submission of quarterly reports to the Director and relevant stakeholders.
- **Minimum Qualification:** Master's Degree in Nuclear Science, Environmental Science, Radiation Protection and Health Physics, or related field with at least 5 years of relevant experience. PGEC in Radiation Protection is an added advantage.

RASIMS COORDINATOR

- **Reports to:** Assistant Director, Radiation Safety Unit
- **Key Responsibilities:**
  - Coordinate the development, maintenance, and implementation of the RASIMS platform.
  - Act as liaison between EPA and the IAEA on all RASIMS-related matters.
  - Ensure regular updates and quality control of data submitted on the RASIMS platform.
  - Monitor and assess national compliance indicators for regulatory infrastructure and radiation safety.
  - Facilitate periodic review and data validation workshops with stakeholders.
- **Minimum Qualification:** Master's Degree in Radiation Protection, Environmental Science, Health Physics, or related field with experience in regulatory data management.

RASIMS DATA ANALYST

- **Reports to:** RASIMS Coordinator

- **Key Responsibilities:**
  - Collect, validate, and input national data into the RASIMS platform.
  - Maintain up-to-date records of national radiation safety infrastructure.
  - Support preparation of national RASIMS reports and self-assessment indicators.
  - Collaborate with institutions for timely data provision.
- **Minimum Qualification:** Bachelor's Degree in Radiation Protection and Health Physics, Environmental Science, or related field with good data management skills.

RAIS DATA OFFICER

- **Reports to:** RASIMS Coordinator
- **Key Responsibilities:**
  - Operate and maintain the national RAIS database.
  - Register, track, and update all authorized radiation sources.
  - Assist in generating regulatory reports from RAIS.
  - Provide technical support during monitorings and licensing.
  - Train staff and stakeholders in RAIS usage.
- **Minimum Qualification:** Bachelor's Degree in Computer Science, Physics, or related discipline with experience in database management.

RADIATION SAFETY LABORATORY SUPERVISOR

- **Reports to:** Assistant Director, Radiation Safety Unit
- **Key Responsibilities:**
  - Oversee laboratory assessments for radiation sources.
  - Supervise safety tests and monitoring of radiological materials.
  - Maintain laboratory instruments and ensure calibration for radiation measurements.
  - Ensure the lab complies with IAEA and EPA safety protocols.
  - Support radiological emergency response drills and technical investigations.
- **Minimum Qualification:** Master's Degree in Health Physics and Radiation Protection, or related field with at least 3 years of supervisory experience. PGEC in Radiation Protection is an added advantage.

RADIATION SAFETY ANALYST

- **Reports to:** Radiation Safety Laboratory Analyst
- **Key Responsibilities:**
  - Conduct monitorings of industrial radiation facilities.
  - Monitor compliance with radiation safety regulations.
  - Evaluate shielding in industrial facilities using ionizing radiation.
  - Provide training for industrial radiation workers.

  - Report violations and recommend enforcement actions.
- **Minimum Qualification:** Bachelor's Degree in Physics, Engineering, or related field with training in industrial radiation safety.

RADIATION SAFETY TECHNICIAN (MEDICAL & INDUSTRIAL)

- **Reports to:** Radiation Safety Laboratory Analyst
- **Key Responsibilities:**
  - Monitor hospitals, health centers and clinics using radiation generating devices and radiation sources.
  - Verify adherence to safety protocols in medical radiation practices.
  - Assess occupational exposure and ensure dosimetry practices.
  - Collaborate with Ministry of Health on radiation protection.
  - Guide healthcare facilities on safe use of radiation equipment.
- **Minimum Qualification:** Bachelor's Degree in Radiation Protection, Radiologic Technology, Medical Physics, or related discipline with professional training in radiation protection.

WASTE AND REMEDIATION UNIT (WRU)

The Waste and Remediation Unit (WRU) is responsible with regulating sustainable waste management practices and managing site remediation initiatives in Liberia. The unit monitors waste handling activities, assesses contaminated locations, and conducts remediation methods using environmentally sound technologies. WRU collaborates with governments regulatory agencies, and international partners to decrease waste-related environmental problems and safeguard community health. Its scope includes both normal monitoring and emergency response to hazardous waste spills and pollution occurrences.

ASSISTANT DIRECTOR, WASTE AND REMEDIATION UNIT

- **Reports to:** Director, Environmental Research, Radiation, and Safety
- **Responsibilities:**
  - Provide leadership and technical direction for the Waste and Radiation Unit.
  - Supervise the implementation of scientific research and remediation projects.
  - Approve monitoring plans, field assessments, and risk evaluation reports.
  - Represent the EPA in national and international waste and remediation programs.
  - Develop workplans, budgets, technical papers, and annual reports for the unit.
- **Minimum Qualification:** Master's degree in Environmental Science, Public Health, Environmental Engineering, or a related field.
- **Experience:** At least 5 years of relevant experience in solid and hazardous waste management, site remediation, radiation safety, and leadership of environmental programs.

SENIOR WASTE SUPERVISOR

- **Reports to:** Assistant Director, Waste and Remediation Unit

- **Responsibilities:**
  - Lead monitorings and technical assessments of waste service providers and facilities.
  - Coordinate research on waste streams and support the development of waste-related standards.
  - Print out Waste Certificate to qualified waste service providers confirmed by the Assistant Director and approved by the Director of Environmental Research, Radiation, and Safety.
  - Guide junior officers in field data collection, compliance evaluation, and environmental monitoring.
  - Review waste-related components of Environmental and Social Management Plans (ESMPs) and Environmental Impact Assessments (EIAs).
  - When seconded, represent the EPA in national and international waste and remediation programs.
  - Supervise emergency response to waste pollution incidents and coordinate interagency cleanup efforts.
- **Minimum Qualification:** Master's degree in Environmental Health, Environmental Science or Engineering, Waste Management, or a related field.
- **Experience:** Minimum 3 years of technical experience in monitoring, regulation, or supervision of waste operations. Prior work in regulatory enforcement or ESMP/EIA review is highly desirable.

WASTE ANALYST

- **Reports to:** Senior Waste Supervisor
- **Responsibilities:**
  - Monitor and document waste collection, transport, and disposal practices.
  - Verify compliance of service providers with EPA regulations and permit conditions.
  - Participate in research and data collection on municipal, medical, hazardous waste, and all other wastes.
  - Assist in environmental awareness outreach related to waste minimization and pollution prevention.
  - Prepare routine monitoring reports and submit findings for compliance decisions.
- **Minimum Qualification:** Bachelor's degree in Environmental Science, Chemistry, Biology, or a related environmental discipline.
- **Experience:** 2 years of experience in environmental monitoring, waste management, or field monitoring work. Knowledge of EPA regulatory procedures is an advantage.

SENIOR WASTE REMEDIATION SUPERVISOR

- **Reports to:** Assistant Director, Waste and Remediation Unit
- **Responsibilities:**
  - Supervise planning and implementation of national waste remediation projects.
  - Oversee identification and assessment of contaminated sites requiring cleanup.
  - Coordinate multidisciplinary teams for remediation planning, design, and execution.
  - Review and approve remediation plans, field protocols, and progress reports.

- Engage stakeholders including local authorities, contractors, and affected communities.
- Ensure health, safety, and environmental standards are maintained during remediation.
- Monitor and report on performance and impact of remediation interventions.

- **Minimum Qualification:** Master's degree in Environmental Engineering, Remediation Science, or a related field. Minimum 3 years of progressive experience in environmental remediation, site management, or hazardous waste cleanup. Experience in supervising technical teams and engaging with local communities is essential.

WASTE REMEDIATION ANALYST

- **Reporting Line:** Senior Waste Remediation Supervisor
- **Key Responsibilities:**
  - Identify and assess sites contaminated by hazardous substances or waste materials.
  - Develop and monitor implementation of site remediation strategies using appropriate technologies.
  - Coordinate field visits with local authorities, communities, and technical teams.
  - Document remediation activities and maintain records in the national remediation database.
  - Ensure compliance with EPA protocols including health, safety, and radiation standards.

Minimum Qualification: Bachelor's degree in Environmental Engineering, Chemistry, or Environmental Science. Minimum 3 years of field experience in site assessment or remediation projects.

ENVIRONMENTAL QUALITY AND STANDARD ANALYST

- **Reporting Line:** Senior Waste Remediation Supervisor
- **Key Responsibilities:**
  - Monitoring air, water, soil, and noise quality.
  - Developing and reviewing environmental standards.
  - Monitoring and evaluating environmental reports.
  - Maintaining environmental quality databases.
  - Supporting enforcement actions.
  - Engaging stakeholders and promoting public awareness.
  - Researching emerging environmental issues.

Minimum Qualification: Bachelor's degree in environmental science, chemistry, biology, engineering, or a related field is typically required. Advanced degrees (master's or doctorate) may be preferred for specialized roles. At least 2 years of experience in environmental monitoring, compliance, or standards development. Knowledge of environmental regulations and quality control methods. Competence in data analysis, laboratory techniques, and report writing. Computer literacy, especially in data management and environmental monitoring software.

EPA
